

Pipo Mascot — Prompt Sheet

Sipnayan · Duolingo-style math learning app · AppBuildersPH Hackathon 2026 · prepared for Yuri Alfrance

What we need

- **38 images** of the same pig character (Pipo) in different poses — see the list below.
- **Start with the 10 ★ PRIORITY poses** (#01, #07, #10, #11, #17, #18, #22, #24, #27, #30) — needed for tomorrow's demo.
- Format: **PNG with transparent background** (or plain white), square, at least **1024×1024**.
- Name each file exactly as shown, e.g. [pipo-01-wave.png](#).
- Pipo must look like the **same character** in every image — same colors, proportions, blue neckerchief with yellow sun pin.

How to build each prompt

Full prompt = BASE PROMPT + ", " + POSE line

Example: *[base prompt]*, Standing, waving one front hoof high, big open-mouth smile, welcoming

Base prompt (paste first, every time)

Cute chibi baby pig mascot named "Pipo" for a kids' math learning app, original character design. Soft pastel pink body, big round head (head larger than body), small floppy ears with darker pink inner ear, large glossy black eyes with white highlights, rosy freckled cheeks, oval snout with two nostrils, tiny curly tail, short stubby legs with small hooves. Wears a small royal-blue neckerchief with a yellow sun-shaped pin. Clean vector cartoon style, smooth soft shading, thin darker-pink outline, flat soft shadow underneath, isolated on plain white background, full body, centered, consistent character, sticker-ready, high resolution.

Negative prompt (if the tool supports it)

realistic, 3D render, photo, text, watermark, logo, extra limbs, extra tail, human hands, clothing other than neckerchief, busy background, dark lighting, scary, sharp teeth, multiple characters

Tips for consistency

- **Step 1 — character sheet first:** generate the base prompt + "character turnaround sheet, front, side, back, 3/4 view". Pick the best one and send it to Yuri for approval.
- **Step 2 — use it as reference** for every pose (image reference / character reference, e.g. Midjourney `--cref`, or the reference-image option in your tool).
- Keep the same **seed** and settings if possible; change only the pose line.
- Don't use stock pig illustrations as image input — Pipo must be an original design.
- Optional: vectorize finals to SVG (Vectorizer.ai / Illustrator Image Trace).
